ApnoMart Q2 2026 — Strategic Insights

Analyst: Amit Kumar Singh · **Date:** October 2026 · **Tool used:** Python (pandas, matplotlib) + HTML dashboard (Chart.js)

Headline numbers (Apr–Jun 2026): Sales ₹133.2L · Profit ₹18.7L · 1,200 orders · Profit margin 14.0%

INSIGHT 1: Revenue Pattern

Electronics drives **56.5%** of total revenue (₹75.3L of ₹133.2L), yet earns only ₹2,161 in profit, a margin of **0.03%**. Office Supplies (48.0%) and Beauty (42.2%) earn far more per rupee sold, but together they are only 14.1% of sales. Monthly sales rose from ₹35.2L in April to ₹50.7L in May, then eased to ₹47.3L in June.

So What: More than half the business sits in a category that creates almost no profit. Growth in Electronics adds revenue and workload but not earnings, so company profit depends on much smaller categories.

INSIGHT 2: Profitability Pattern

All **200** loss-making orders are Electronics, losing ₹2.24L in total. Electronics orders with discounts above 20% (118 orders) lose ₹1.60L combined, a margin of −8.2%. North is the weakest region: 25.1% of sales but a **9.8%** margin versus 14.7–16.1% elsewhere, driven by an average discount of 19.0% compared with 12.9% in other regions. Electronics in North runs at −5.3% margin (₹0.99L loss).

So What: The profit leak is a discount-policy problem, concentrated in Electronics and amplified in North. It is not a demand problem.

INSIGHT 3: Customer Behavior Pattern

Corporate customers place 25.5% of orders (306 of 1,200) but contribute **40.7%** of revenue (₹54.3L), with an average order value of ₹17,734, about **2.0x** the Consumer segment's ₹8,840. Corporate margin (14.0%) matches the company average, so these larger orders are not bought through deeper discounts. UPI is the dominant payment method at 39.8% of orders (38.5% of revenue), well ahead of Credit Card (19.8%).

So What: Corporate buyers deliver high-value, healthy-margin orders and are a natural segment to grow. UPI-first checkout is what most customers expect, so keep it fast and reliable.

STRATEGIC RECOMMENDATION

Cap Electronics discounts at 15% across all regions, starting with North. 269 of 381 Electronics orders (71%) were discounted above 15%, and together they lost ₹1.74L. Capping them at 15% would turn that into roughly ₹2.9L profit, an uplift of about **₹4.65L per quarter (+25% on total profit)** if volume holds, and about **₹3.9L (+21%)** even if a quarter of the affected orders are lost. Reinvest part of the gain into a Corporate B2B offer (volume pricing, invoicing) to grow the segment that already buys at 2x the order value.

Method note: uplift = recomputing profit on Electronics orders with discount above 15% at a 15% discount, holding cost of goods constant. The data is a synthetic practice dataset, so figures are illustrative.

DASHBOARD SCREENSHOT
